

OLD SPINNAKER MEASUREMENT SHEET

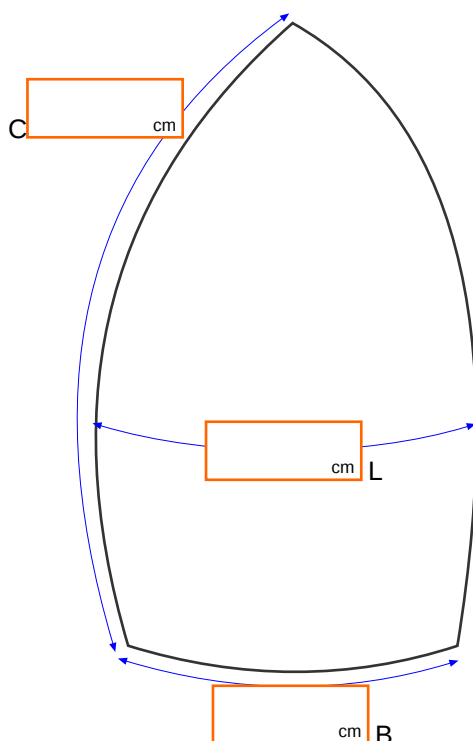

Boat model :		Length :	
Marina - place num. :		Weight :	

La Voilerie ©2025-spi111025

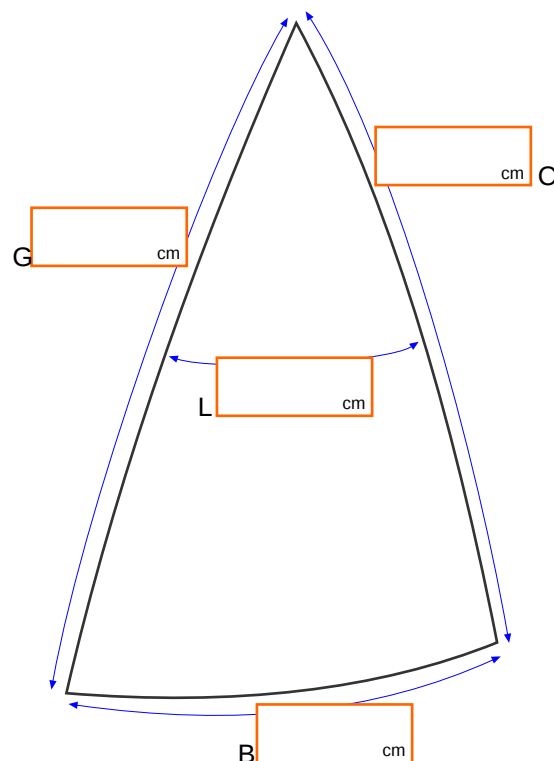

To correctly fill out the measurement sheet, follow the numbering order (1 to 2)

1a Symmetrical Spinnaker

Measure the drop C
Measure the edge B
Measure the greatest width L. The greatest width is measured parallel to the edge. You will need to take multiple measurements to find the greatest width.

1b Asymmetrical Spinnaker

Measure the luff G
Measure the leech C
Measure the foot B
Measure the width L from the middle of the luff to the middle of the leech. To obtain the middles, fold the luff in half and make a mark, then fold the leech in half and make a mark. The measurement L is the distance between these two marks.

2 Observations - Desired range of use of the new spinnaker
